

A Note from Our Director

Welcome to the second edition of Mobitech Monthly Insights. We share the latest updates, farmer success stories, and tips on smart agriculture. We're making farming easier with wireless irrigation automation, saving time, reducing costs, and improving field management.

In the near future, we will introduce AI-powered recommendations. These insights will support farmers in improving plant growth and planning irrigation strategies well in advance for healthier and more productive harvests.

Some plants, like sunflowers, can actually track the movement of the sun across the sky — a behavior called heliotropism.

Tips & Insights

Remote Farm Management

Checking soil moisture and controlling irrigation from my phone anytime saves time and labor

Smart Water Monitoring

Scheduling and monitoring water usage is so easy. The map view clearly shows which areas have been irrigated and which haven't

Solve Labor Scarcity

Automate irrigation and fertilizer application to reduce dependency on manpower while ensuring precise delivery

Farmer Spotlight – Testimonial

This month, we feature the manager of Solaipathy Mathathukkadu, who manages 45 acres remotely using Mobitech automation

Managing 45 acres remotely was tough, but with Mobitech automation, I can monitor and control irrigation from Tenkasi while the owner is in Delhi

We used to need 5 people to manually operate the gates, but uniform irrigation was never guaranteed. Now, a single guard manages everything, and every tree gets the right amount of water and nutrients through automated venturi systems, saving time, reducing labor, and improving crop quality

NEWSLETTER

Even watering and complete remote monitoring with Mobitech

I get even watering and complete remote monitoring across my farm. It maintains optimal water levels, prevents wastage, and ensures every tree receives the right amount of water. My Amla yield has improved, and I can easily track motor performance and water usage through the mobile app

At Mobitech, we create solutions that put farmers first. Stories like mine inspire us to keep innovating. In upcoming editions, we'll share more farmer experiences, product updates, and practical tips to help you manage your farm smarter and more efficiently

Service with No Time Limits

This month, we turn the spotlight on Mr. Jaiyanth – Service Manager, whose dedication goes far beyond the clock. Known for his commitment to customer care, Jaiyanth doesn't just resolve issues during office hours—he makes himself available even after 6 PM and on Sundays, ensuring farmers and clients get timely support whenever they need it.

His willingness to step in at any time reflects his true passion for service and his belief that customer satisfaction comes first. Jaiyanth's efforts have built strong trust among our customers and set a benchmark of reliability within our team.
