

A Note from Our Director

At Mobitech, every new step comes from a simple idea – to make technology work better for people and the planet.

We're happy to share that we're now moving into Large Water Management Systems. This is a big step for us, one that allows our experience in smart irrigation and

automation to make an even greater difference – not just in farms, but in large communities and projects where every drop counts.

Our journey grows stronger with every hand and heart that supports it – thank you all

Mango trees can live for over 100 years and keep producing delicious fruits throughout!

Tips & Insights

Control Your Farm Anywhere

With the Mobitech app, you can manage irrigation remotely – anytime, anywhere – ensuring timely water supply without depending on labor.

Schedule Smartly

Set watering schedules based on crop type, soil condition, or weather – and let the system handle it precisely.

Monitor with Real-Time Data

Get instant data on soil, water, and irrigation performance right on your phone

Farmer Spotlight – Testimonial

This month, we share the story of a farmer from Kolakeerathur, Karkala Taluk, managing his 3-acre farm with Mobitech's Smart Irrigation Automation System.

I faced challenges initially after installing my irrigation pipeline through a local vendor, because the setup was not done properly

I came across Mobitech automation and contacted them. They did a detailed site survey and created a design plan, ensuring water reached all areas efficiently and on time

With the new smart irrigation system, my farm runs smoothly, and I can control all watering from my mobile using the Mobitech app

NEWSLETTER

Timely irrigation and total farm control with Mobitech

Since installing the smart irrigation system, water reaches every part of the farm on time, and the mobile app makes controlling everything simple, even from far away. Labour costs have reduced significantly, and farm operations are much smoother.

The system saves time and effort, making daily farming much easier and stress-free, and it truly feels like modern technology is supporting agriculture. Managing the farm has never been this simple, easy, and efficient

A Decade of Dedication

Ten years ago, Kamala Kannan joined us as a junior technician with just a toolkit and a big dream. He was known for staying late — once rebuilding an entire controller board overnight just to “see if it could work better.” It did. That small experiment ended up improving one of our earliest product prototypes.

Over the years, Kamala Kannan’s ideas turned into real innovations — from designing compact IoT modules for field devices to leading the team that developed our first smart irrigation controller. Today, he leads as the Head of Hardware & Design, proving that curiosity and hard work can turn small ideas into big milestones.
