A Note from Our Director

On this World Water Day, as the Director of Mobitech Wireless Solution, I take pride in how our automation technology is transforming the way water is used in agriculture. Through smart irrigation systems, we enable farmers to monitor and control water usage with precision, ensuring that every drop is used effectively for plant growth. This not only reduces water wastage but also improves crop productivity and operational efficiency. By integrating technology with farming practices, we are helping conserve one of our most valuable natural resources. we are committed to building a sustainable future where water is preserved for generations to come, while supporting farmers and protecting Mother Nature.

-Mr. Kumar (Director of Production)

Did you know?

Tomatoes were once considered poisonous in Europe.

Tips & Insights

Multi-Zone Control

Control different farm zones independently for better water distribution.

Improved Yield

Consistent and optimized irrigation leads to healthier crops and higher productivity.

Fault Detection

Identify issues like leaks or pump failures instantly and act quickly.

Farmer Spotlight – Testimonial

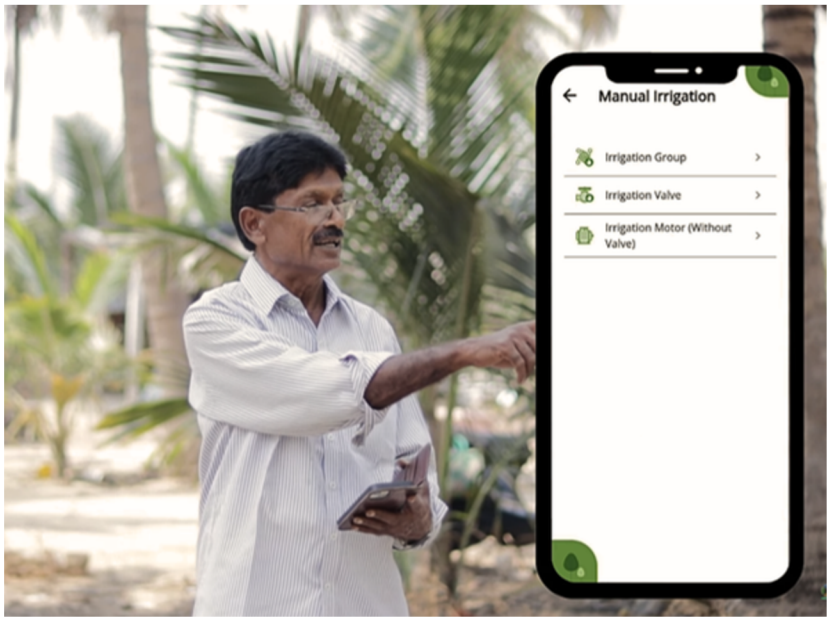

Mr. Subramaniyam, a dedicated farmer with over 40 years of experience, manages a 25-acre farm near Udumalaipet. For many years, he struggled with irregular water supply, manual irrigation challenges, and high dependency on labor.

After implementing Mobitech Automation, his irrigation system became consistent and reliable, ensuring crops receive the right amount of water daily. This shift significantly improved crop health, growth, and overall productivity.

With the help of mobile-based remote control, he can now manage his irrigation system from anywhere, eliminating the need for constant supervision and frequent visits to the field.

IRRIGATION AUTOMATION

Transforming 25 Acres with Smart Irrigation

The impact has been remarkable—labor requirements reduced from three workers to one, operational stress decreased, and yields improved noticeably. Today, he enjoys more efficient farming and greater peace of mind.

"With automation, farmers can reduce their difficulties and achieve peace of mind. We no longer depend on others—we can manage everything through our mobile phones."

Mr. Subramaniyam strongly recommends automation to fellow farmers, emphasizing how quickly it can be implemented and the long-term benefits it delivers.

Unstoppable in Every Condition

Whether it's day or night, rain or extreme heat, the Technical Team remains committed to their work. From remote villages to hill stations with limited support, they ensure every task is completed with dedication.

Long hours, overnight stays, and tough conditions are part of their routine, yet their focus on serving farmers never changes.

This unwavering commitment has driven Mobitech's success. At **TN Tech Connect 2026**, Zone 1, led by Mr. Ajith Kumar, was honored with the **Best Technical Team Award**.
